Plugin WPBakery Page Builder disabled by default

This plugin is deactivated by default automatically. **You must reactivate from the WordPress admin panel after completing the installation** or from the plugins tab. Your site's frontend will render properly after reactivating the plugin.

Please search the [Online Technical FAQs](#) for solutions to these issues.

Step 2 of 2: Test Site

 Admin Login

Click the Admin Login button to login and finalize this install.

☒ Auto delete installer files after login to secure site (recommended!)

⚠ FINAL STEPS: Login into the WordPress Admin to remove all installation files and finalize the install process. This install is NOT complete until all installer files have been completely removed. Leaving installer files on this server can lead to security issues.

Install Result

General Notices	(0)	good

Database Notices Report

► DB EXTRACTION - INSTALL NOTICES (51)

Queries that error during the deploy step are logged to the [installer-log.txt](#) file and marked with an ****ERROR**** status. If you experience a few errors (under 5), in many cases they can be ignored as long as your site is working correctly. However if you see a large amount of errors or you experience an issue with your site then the error messages in the log file will need to be investigated.

COMMON FIXES:

- **Unknown collation:** See Online FAQ: [What is Compatibility mode & 'Unknown collation' errors?](#)
- **Query Limits:** Update MySQL server with the [max_allowed_packet](#) setting for larger payloads.
